## Desktop video recorder app

When it comes to attacking dubious Microsoft Windows 8 design solutions, ExtremeTech is no stranger. When I first learned about the subway interface that leap into Windows 8, I predicted the death of a computer. When Matthew Murray tested Consumer Preview, he threatened to leave Windows on Linux. When Microsoft killed the Start button, but we couldn't see almost any recourse to the average Windows user. Yes, I have spent the last two weeks trying to convince you that the new Windows 8 interface, despite the fact that it is obviously sensor-oriented, is actually designed for the mouse and keyboard, but at the end of the day the vast majority of Windows users are not power users. You and I may know that by tapping the Windows key on your keyboard appears on the Start menu / Screen, but as the video below clearly shows, real people are not. In the video, Chris Prillo (of Lockergnome fame)'s dad first tries to use Windows 8. Here's an agonising example of why Microsoft hasn't had to remove the design element that users have relied on for almost 20 years because Windows 95. At on this subject, of course, I have to throw out one of my favorite videos: two-year-olds using an iPad for the first time. It's not too late for Microsoft to restore the Start button! Read more geek While Zooming is all the rage, 5-minute meetings can end up becoming 45-minute conversations. Vimeo Record strives to deliver messages quickly and efficiently in the most efficient format, video. The purpose of Vimeo Record is to improve workplace collaboration, productivity and knowledge sharing using the free video messaging tool. As more and more companies work with their teams remotely, communication with handed out teams must be more efficient and up to a point. The video message allows you to do this. Vimeo Record is part of a wider toolkit, Vimeo Record, designed to help companies communicate better with their employees, partners and customers. Anjali Sud, Vimeo's CEO, says that the video message can provide long interactions in context and value over time. Vimeo Record is a free Chrome extension with unlimited screen recording. After you upload it to Chrome, you can start a post from your browser with just two clicks. You can save the screen using a sound, webcam, or both. This includes the full screen or app, as well as choosing to turn the camera off or on. When you save, you'll have more options: Share Privately or Add Anywhere: Share a post with a personal link or insert it into your website and channels. Review and comment: Track projects by collecting and addressing feedback from team members or customers. Viewer Analytics: Get insights about your audience with notifications when someone watches your video. Secure access: Manage records in folders and give team members, customers, and customers access with permissions you set. Is Vimeo A Record for You? As suggestion, you can not go wrong when trying a tool offered by one of the leading video solutions providers world, Vimeo. You'll be able to join on your personal level, while giving your meeting context and value in less time. Start recording the screen and provide a message explaining what you need to say with apps or other content. You can instantly transfer knowledge and simplify the feedback process while providing secure access to the entire team. Each of the creative teams of freelancers, agencies, trainers, educators, customer service and more can benefit from the Vimeo Record. Image: Vimeo Video Editing takes a lot of work not only at your end, but also on the computing side. While any computer can make simple edits, you need a beef machine to handle video at 4K resolution and at higher resolution. That's why we love Alienware Aurora Ryzen Edition PC. It has an extremely powerful, 16-core AMD 3950X processor with Nvidia RTX 2080 Super for all the required results. But it's not the only one we love. Here are five of the best desktop video editing you can find now, starting from the standard tower to a slightly miniature workstation. The best video editing desktops at first glance: The best Alienware Aurora Ryzen Edition Dell's Alienware Aurora is not just a gaming powerhouse: It's a beast for video editors. Under the hood we chose amd ryzen 9 3950X 16 kernel processor simply because of the large number of threads (32) compared to the low cost compared to a similar Intel processor. The basis of this chip is Nvidia GeForce RTX 2080 SUPER Discrete GPU packing tensor cores for machine learning and supersampling, as well as high core computing and clock speed for easy attack 3D rendering and exposure tasks. For these two chips, you can configure dell desktop up to 64GB hyperx fury system memory. It also supports dual disks: up to 2 TB M.2 on the primary SSD and up to 2TB of 7200RPM hard disk data. Connectivity options are insane, but with many USB-A 3.2 Gen 1 ports on the front and even more on the back, offers a higher and lower speed usb-A 3.2 Gen 2 and USB-A 2.0 connection. Wi-Fi 5 connectivity directly from the box allows you to connect to the Internet and connect more easily than ever, although there is also wi-fi 6 upgrade option if you need additional network bandwidth. The rest of The Apple iMac Pro If you want an all-in-one computer, Apple's iMac Pro is a solid choice. The starting price is a high of \$4,999 and it rises a lot if you configure it with better, more expensive components. However, behind the 27-inch screen there are plenty of horses, such as the Intel 18-core Xeon W-2191B processor and the AMD Radeon Pro Vega 64X standalone GPU. You can even configure this all-in-one monster with up to 256GB of system memory running at 2,666MHz. Want the power of video editing? You have it. The IPS screen is large 5,120 x 2,880 maximum brightness of 60Hz and 500 nits. For storage, your options are limited, from 1 TB to 4TB PCIe NVMe SSD. Your ports are also limited, offering four to four (5Gbps), four Thunderbolt 3 (40Gbps), an SD card reader and a headphone jack. A big plus here is an Ethernet port that supports 10Gbps transfers in preparation for the future. This AIO includes built-in speakers and Apple's magical peripherals. Corsair One Pro 1180 Gaming company Corsair has immersed its tus into a compact workplace space with the Corsair One Pro 1180. Measuring only 7.87 (D) x 6.79 (W) x 14.96 (H) inches, this Mini-ITX desktop packs a punch thanks to intel CPU selection, including a Core i9-9920X processor with 12 cores and 24 threads. It is complemented by Nvidia GeForce RTX 2080 or RTX 2080 Ti graphics cards and up to 64 GB of system memory running at a frequency of 2,666MHz. The only task to get your video editing method is for this workplace's huge gaming potential. Storage configurations include a 500GB or 1TB M.2 NVMe SSD paired with a 2TB 5400RPM hard drive. Connectivity includes three DisplayPort outputs that support three simultaneously connected 4K displays, an HDMI port on the front of the VR headset, multiple USB ports that support 10Gbps transfers, and many others that support standard 5Gbps speed. This desktop doesn't download peripherals, but it syncs its RGB lighting with other Corsair devices through the iCUE platform. Dell XPS Desktop Special Edition This Dell XPS machine may be cheaper than most other entries on this list, but that doesn't mean it can't. The configuration we selected has an Intel Core i7-9700 eight-core processor paired with an Nvidia GeForce GTX 1660 Ti individual GPU. You have an 8GB memory option, all the way up to 64GB. The latter is completely overkill, so it is recommended 16GB or 32GB. You can upgrade the CPU and GPU, as well as through the configuration process, to the i9-9900K processor and up to the RTX 2080 Super Graphics Card. For storage, your options are a little limited. One drive ranges from 512GB to 2TB, and your choice opens when configuring dual drives. The video output depends on the GPU you choose, although you'll find 11 USB ports that transfer data to 10Gbps, 5.1 channel audio ports collection and load more. On this desktop, there's even a DVD writer that you can swap for a Blu-ray writer for an extra \$50. Hp Z2 Mini G4 If you need a workplace that is really small, the HP Z2 Mini G4 matches the bill. It measures only 2.28 x 8.5 x 8.5 inches, although you'll find plenty of performance packed inside, despite its small size. You can configure the HP workstation on your website, but in other locations you'll find Intel's eighth and ninth generation Core i3, i5 and i7 processors along with the Xeon processor family. You will also find units with only integrated graphics and others with a GPU with up to Nvidia Quadro P1000 discrete. For two processors, this miniature workstation supports 4GB of 64GB of system memory. It can also work on two storage devices: 256GB to 2TB primary SSD and 500GB to 2TB secondary hard The connection depends on the model, because you will find units with three DisplayPort connections, some with serial ports, and so on. By default, you'll see at least one DisplayPort connector, multiple USB-A ports, a USB-C port, and an Ethernet on the side. Recommendations for editorial recommendations
